1. The first part of the report is a general introduction to the subject of the study. It discusses the importance of the problem and the objectives of the research.

2. The second part of the report is a detailed description of the methods used in the study. It includes a discussion of the experimental design, the data collection procedures, and the statistical analysis techniques.

3. The third part of the report is a presentation of the results of the study. It includes a discussion of the findings, a comparison of the results with previous research, and a discussion of the implications of the findings.

4. The fourth part of the report is a conclusion and a discussion of the limitations of the study. It includes a summary of the main findings and a discussion of the strengths and weaknesses of the study.

The results of the study show that there is a significant relationship between the variables studied. The findings suggest that the proposed model is a good representation of the data.

The study has several limitations, including a small sample size and a lack of control over some of the variables. Despite these limitations, the study provides valuable insights into the problem.

Better Subjects of the Better Kinds from **GULF STREAM**

MUSK ROSE, Robin Hood (Pemb. 27)

Unmistakably, this beautiful Musk Rose hybrid is the finest hedge rose ever offered. Originated in a well-known English nursery, it has everything a hedge rose should have. For small gardens, it is vastly superior to the much overrated Multiflora. In spring, densely compact plants produce an abundance of healthy, deep green foliage that is completely covered with large, blazing clusters of brilliant, cherry-red flowers. Continues to bloom attractively all summer and fall. The hedge illustrated at right, a 3-yr.-old test planting, withstood below zero temperatures without injury last winter. A truly fine hedge rose you can sell in quantity, at a price, and give the small home owner something of unusual merit.

MUSK ROSE, Robin Hood (Pemb. 27)

FORSYTHIA, Beatrix Farrand

A spectacular new Forsythia originated at the Arnold Arboretum by Dr. Karl Sax. It is an extremely vigorous grower, making a large symmetrical bush. The deep, golden yellow flowers are over 2 inches in diameter, and have striking orange markings in the throat. Beatrix Farrand is a hybrid between Arnold Giant, a tetraploid variety, and a diploid species. 18-24 inches, 2-3 ft., and 3-4 ft.

FORSYTHIA, Lynwood Gold

A deep, gold-flowered Forsythia. Profuse bloomer with large, individual flowers. Will replace all other deep yellow varieties. 18-21 in., 2-3 ft., 3-4 ft., and 4-5 ft.

HYPERICUM, Hidcote

A compact, twiggy shrub covered throughout the summer with bright yellow, cup-like flowers. In cold winters it may freeze back to the ground, but will spring up again from the base and produce masses of flowers. 2-year-old.

STEPHANANDRA, Incisa Crispa

Graceful, very dwarf shrub has finely incised, bright green leaves that change to a brilliant reddish purple in autumn. Grows well in shade and is a splendid ground cover. Produces small clusters of white flowers, but is really grown for its dainty fern-like foliage. 2-year-old.

TAMARIX, Pink Cascade

This charming newcomer from England is excellent for seashore planting. Pink Cascade is destined to be very popular because it produces masses of cascading panicles of flesh-pink flowers in late summer when very few shrubs are in bloom. Handsome, rich, blue-green foliage. 18-24 inches, 2-3 ft. Plant Pat. No. 1275.

MAPLE, Crimson King

Acer Platanoides Schwedleri Nigra (Patent No. 735)

New FORSYTHIA,
Beatrix
Farrand

**"CRIMSON
KING"**
MAPLE

Include patented Crimson King Maple on your list in 1958. It's the only Maple which retains its dark crimson color throughout the spring, summer and fall, creating an exciting and continuous color contrast to lawns and shrubs. Be sure you get the original Crimson King, it is easily recognized by the dark, glistening, satiny sheen of its colorful foliage—insist on Crimson King.
